

ERIC APOSTAL

Raleigh, NC · eric@rubiscoapp.com · +1 704 614 7926

EDUCATION

North Carolina State University
BS Computer Science

Raleigh, North Carolina
Aug 2024 - Dec 2027

EXPERIENCE

Epic Hire

Lead Software Engineer (Flutter)

Raleigh, North Carolina
Jan 2026 - Present

- Architect and scale a production Flutter platform supporting 100+ companies and 30,000+ students, overseeing the end-to-end feature lifecycle from design to production.
- Make effective use of WebAssembly to deliver a fast and consistent experience on web.
- Develop a real-time messaging solution based on sockets, ensuring a complete and reliable communication experience.
- Implement a single-codebase strategy to increase development efficiency and remove synchronization barriers between Android and Web.
- Build an SPA backed by service workers to provide persistent app state across the entire application.
- Own the end-to-end product feature lifecycle from business idea to execution: conceptual design in Figma, iterative prototyping, to the final production release.
- Engineered a high-performance SEO templating engine in Go to handle dynamic metadata injection, enabling full search engine indexability, despite being an SPA.

Epic Hire

Software Intern

Raleigh, North Carolina
May 2025 - Jan 2026

- Develop fast and engaging Web and Android experiences from the ground up.
- Lead the Android and Web platform development efforts to develop apps for 20,000+ users.
- Design and develop a Go-based SEO translation server to allow for the parsing and indexing of SPAs.
- Utilize Flutter to create multi-platform, consistent and performant user interfaces.
- Implement Firebase notifications and analytics as well as Mixpanel to understand user usage and growth.
- Set up automated Google Play and Web deployments for ease of distribution.
- Collaborate with peers to ensure timeliness and cross-platform consistency.

North Carolina School of Science and Mathematics

Teacher's Assistant

Morganton, North Carolina
Aug 2023 - May 2024

- Spend at least 2 hours a week assisting students through engineering and software challenges.
- Fix the school's DJI Mavic 3 drone after collision; pull flight data, diagnose error logs, resolder arms and replace camera assembly.
- Manage inventory and verify the functionality of motors, as well as various other mechanical parts.

North Carolina School of Science and Mathematics

Robotics Team Lead

Morganton, North Carolina
Aug 2023 - May 2024

- Managed competitive VEX Robotics team.
- Delegate tasks and managed work timeline to ensure we reach deadlines.
- Worked with Robotics department to advise purchasing.

SKILLS

Programming Languages:	Dart, Python, Go, Rust, C, C++, C#, Javascript, Typescript, Java
Frameworks:	Flutter, Echo, Svelte, Flask
Libraries:	Redux, Reflex, Riverpod, SQLite, Selenium, Matplotlib, Seaborn, ScyllaDB
Hardware Platforms:	Arduino, Raspberry Pi

PROJECTS

Rubisco Go, C++, WebRTC, Flutter, Dart, Godot, Git, Svelte
A distributed socialization platform for gamers.

NCSD Clock Tower *Python, Raspberry Pi, Linux, Systemd*

<https://github.com/EricApostal/ncsd-clock-tower>

Software powering the clock tower at the North Carolina School for the Deaf. I was interviewed by a local news station about how I collaborated with NCSD to write the code and ultimately allow it to work again.

Bonfire *Flutter, Dart, WebRTC, JS, TS, Git*

<https://github.com/OpenBonfire/bonfire>

A complete re-implementation of Discord in Flutter

AWARDS

First Place in the Engineering Grand Challenges Poster Competition

NC State

Recognized for taking first place in the North Carolina State Poster Competition - Joy of Living category, out of every first-year engineering student.

Dec 2024

CyberPatriot 3rd Place State

CyberPatriot

Competed in a group of four that won 3rd place in the state for CyberPatriot, a cybersecurity competition run by the Air Force Association.

Feb 2024

Hackathon Eco-Equality Winner

North Carolina School of Science and Mathematics

Created a hackathon project that aimed to use consumer drones to map terrain, and input that in an AI model to find the contents of the soil and determine farmability per-crop. Took first place in our category.
